

Réalisé avec 18/11/2025 avec réfrigération Xpress V 7.8.3- Central 18.2.9 base de données

Nom du projet: MPC
Adresse du projet France
Nom du client: MONOBLOC PLAFONNIER

Seules les données du databook sont valables. Ce programme utilise des approximations relatives à ces données.

1. Liste du matériel

Modèle	Qté	Description
MPC1110YA11X	1	MT monobloc

2. Groupe extérieur Système 1

2.1. Données de sélection

Référence complète du modèle		Application
MPC1110YA11X		MT monobloc
Réfrigérant		
Type		R290
GWP		3
Données de sélection		
Position		Plafonnier
Surrounding temperature		32,0°C
Données mécaniques		
Longueur		624mm
Hauteur		486mm
Profondeur		779mm
Poids		56,0kg

The monoblock, during its operation, is discharging a lot of heat which would need to be removed to secure the good operation of the unit. We assume that where the monoblock is situated, the surrounding air is conditioned. This can come from a separate air conditioning unit or by an additional local ventilation system. It is the designer responsibility to define the real surrounding ambient design conditions of the place where the monoblock will be installed, because this has an impact on the delivered capacity of the selected monoblock as well as the operation of it.

Important notes:

- Supervising system for remote monitoring and cloud access (3MCB001ACC (LAN only) or 3MCB002ACC (LAN + WIFI)): If you have single or multiple monoblock installed within one cold room, you only required one device. This device can be connected to all installed monoblock with the usage of a 3rd party wiring connection. Please refer to the Installation manual how to connect.

GWP = Global Warming Potential

TCO₂ eq. = Tonnes de CO₂ equivalent

L'Equivalent Carbone (TCO₂) est calculé en considérant uniquement la charge de réfrigérant de base. En fonction de longueurs de tuyauterie, une charge aditionnelle peut être nécessaire augmentant ainsi l'Equivalent Carbone de la solution.

2.2. Capacity Table

T room	T surround	Max cap	Min cap	T room	T surround	Max cap	Min cap
°C	°C	kW	kW	°C	°C	kW	kW
-5,0	5,0	1,45		5,0	5,0	2,03	
	10,0	1,36			10,0	1,92	
	15,0	1,27			15,0	1,80

4. Spécifications

Général

To increase the efficiency of the system, please group all the cabinets with the same operating condition together, because it is the refrigerated cabinet or evaporator with the lowest evaporation temperature that will determine the evaporation temperature of the outdoor unit.

CVP

- Il est important de charger le Conveni Pack avec la plus grande charge frigorifique pour maximiser la récupération de la chaleur.
- La capacité de climatisation est donnée à une température ambiante du magasin de 22°C en hiver et 20°C en été, aux conditions de la température extérieure.
- La capacité de climatisation ainsi que la capacité de chauffage délivrée par les unités intérieures seront plus élevés lorsque le ratio de capacité intérieure maximale est utilisé.

ZEAS

- Aucune unité intérieure de climatisation ne peut être connectée à une unité de ZEAS.
